Edlington HFR/AW 8.3m Roll

Land contour following twin pivot Hydraulic Folding Rolls

The HFR/AW roll comes in a wide range of weights to suit your needs. With even weight distribution over the three units, the weight is transferred by hydraulics so that even at the tips the wing rolls are applying the weight efficiently.

And the HFR/AW follows the contours of your land because each wing has two pivot points, one near the centre of the frame and one in the centre of each wing.

This combined with a special drawbar mounting, enables the roll to compensate for undulations (waves) it encounters - head on. The HFR/AW and the HD models also have large diameter rings - 22" and 24" with automatic wear take up, reduce power and traction requirements and these rings can also break up clods without the need for breaker rings.

The rings are only 3" wide so you get more than a third more peaks than usual, and if you have our breaker rings fitted - they keep the roll clean without damaging crops. The framework is made with box section steel that is 6-8mm thickness and strong bearings.

The change over from work to transport is simple. Which makes sure you don't scuff up your field near the gate.

You won't have any corrosion caused seal problems either, because the ram rod is inside the cylinder when the roll is in transport position. And maintenance is simple too.

The bearings need one stroke of grease, once a season. These rolls are tough and built to last with a strong steel frame and special steel shafts.

Prices and options:

HFR/AW

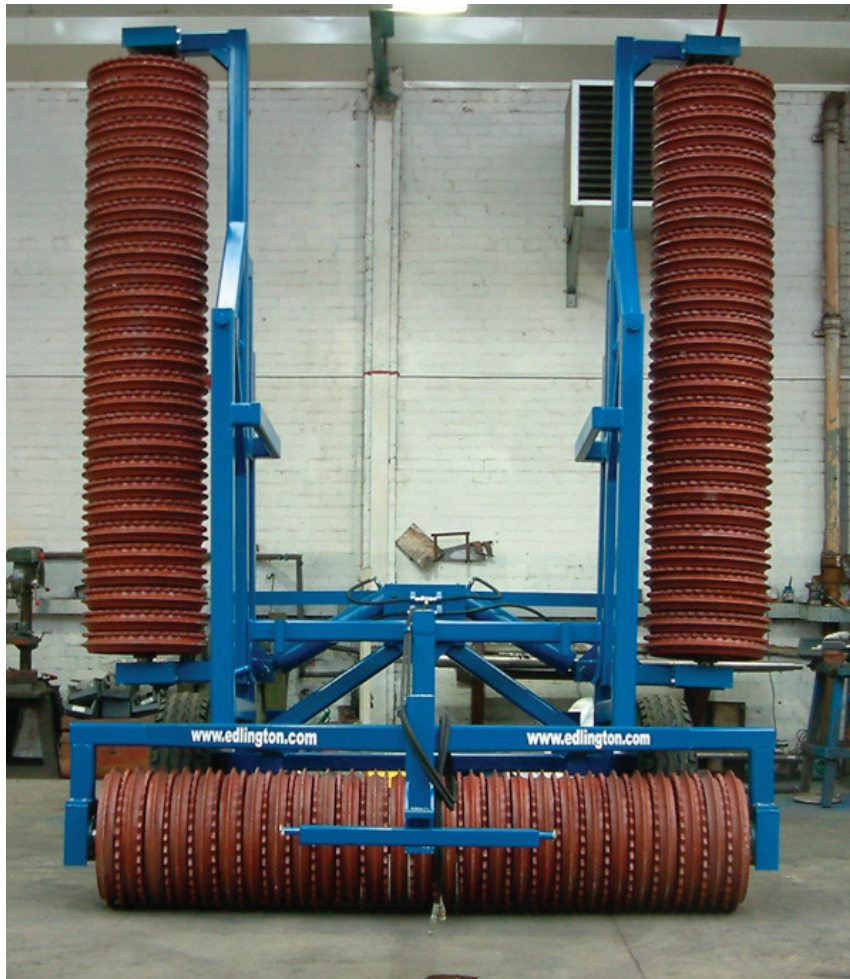

- 22 inch rings (4.1t) - £10,285
- 22 inch breaker rings (4.6t) - £10,589
- 24 inch rings (4.7t) - £10,895
- 24 inch breaker rings (5.4t) - £11,474
- 26 inch rings (5.2t) - £12,474

HFR/HD

- 22 inch rings (4.4t) - £11,285
- 22 inch breaker rings (4.9t) - £11,589
- 24 inch rings (4.9t) - £11,895
- 24 inch breaker rings (5.8t) £12,474
- 26 inch rings (5.4t) £12,895

EDLINGTON

These rolls perform their task most efficiently. Whatever you are rolling, say for slugs in Oil Seed Rape, if you do not get enough weight down evenly and the rolls don't follow the unevenness of the land, you will not reduce the pests' action fully and your cash in the bank at the end of the season is going to suffer because of lower yield.

The Edlington HFR/AW rolls combine simplicity with strength and are manufactured in the UK by a long established family firm.

The 'AW' which has been in production since 1980, tows from a bar fitted between the two lower lift arms of the tractor. This method is highly successful, giving good ground clearance and simplicity reflected in the competitive price.

The 'HD' tows from the tractor hook, powering itself into transport position by a hydraulic ram on the drawbar, this enables it to work with a folding Disc Harrow and Double Presses, operating hydraulically from the same power line.

Both rolls have reasonably priced spares available.
